Summary

As a software engineer with 3 years of professional experience, I am passionate about developing innovative solutions that solve complex problems. My expertise includes designing and developing scalable applications, collaborating with cross-functional teams, and implementing best practices in software development.

Last 5 years of studying have become for me a great opportunity to try myself in such fields of IT as backend, frontend, mobile, cross platform and low-level development, data science, design, information security and reverse engineering. Nowadays I am working on my graduation work about methods for bypassing blocking of Internet resources and Internet censorship by traffic proxying, tunneling and obfuscation, as I am for freedom in the internet.

In my career I am looking to enhance my technical skills in backend development, software design, testing and implementing reliable and secure systems. For now, I am exceedingly interested in studying cluster and cloud solutions for developing and deploying scalable high-performance applications. I extremely like creating software products that are wonderful both for a glance of users and developers. That's why I am always open for any offers to create something that could be useful for people or even change the world for the best.

Experience

Back End Developer

ООО "Комфортел"

Aug 2022 - Present (8 months)

Backend engineer with speciality in restfull APIs, network security and backend development.

Implementing and testing server side part of smart home and IoT management application.

Implementing microservice architecture with Nest.js, Keycloak, Kafka, HTTP and MQTT. Backend engineer with speciality in restfull APIs, network security and backend development. Implementing and testing server side part of smart home and IoT management application. Implementing microservice architecture with Nest.js, Keycloak, Kafka, HTTP and MQTT.

Skills: Internet of Things (IoT) · Smart Home Technology · Jenkins · Mongoose ODM · Node.js · Python (Programming Language) · Apache Kafka · TypeScript · Jest · MongoDB · Open API · GitHub · Microservices · Mqtt · NestJS · Network Security · REST APIs

Full Stack Engineer

Freelance, Self Employment

Jul 2020 - Present (2 years 9 months)
